To address these issues, Sun [20] developed a fuzzy PID controller based on improved genetic algorithm, which used multiple fuzzy control rules to adjust parameters by genetic algorithm.

Optimizing pump-probe reflectivity measurements of ultrafast photoacoustics with modulated asynchronous optical sampling

Additionally, for models that satisfy Dobrushin's condition ($\rho < 1$), we proved mixing time bounds for sequential and asynchronous Gibbs sampling that differ by only a factor of $1 + O(\rho)$.

Representative work in this area is as follows. For the estimation problem of randomly sampling a neural network with an unknown sampling interval, this paper designs a density

Asynchronous optical sampling ASOPS has already been demonstrated in 1987 with mode-locked picosecond lasers at low repetition rates 82 MHz. It is a technique that enables

The approaches based on asynchronous optical sampling (ASOPS) [5-12] and electronically controlled optical sampling (ECOPS) [13,14] are promising candidates for THz-TDS

Read Full License 1 A modified sequential kalman asynchronous track fusion based on 2

We propose a novel search algorithm, Generalized Uncertainty-aware Thompson Sampling (GUTS) that follows the parallelized Thompson Sampling framework [1], [7], [8]. We

In this work, an asynchronous equal optical path difference (AEOPD) sampling method is proposed to avoid the optical coupling due to the synchronous signal acquisition.

Given the massively faster run time, Asynchronous Gibbs appears to outperform multicore sequential-scan

Gibbs sampling. We were unable to acquire a cluster with more hardware on which
